Chapter 1: Machine Learning Basics

Machine learning is a method of data analysis that automates analytical model building. Based on the idea that systems can learn from data, identify patterns and make decisions.

Chapter 2: Neural Networks

Neural networks are a series of algorithms that mimic the operations of a human brain. They recognize underlying relationships in sets of data through a process of learning.

Chapter 3: Future of AI

The future of artificial intelligence holds enormous promise across multiple domains.

Ethical considerations around AI include fairness, transparency, privacy, and accountability.
